

UV CLEAN DESK

No other air purification is more effective at neutralizing micro-organisms than ultraviolet light radiation. Ultraviolet light possesses just the right amount of energy to break organic molecular bonds. As micro-organisms pass by the UV rays radiated from the ultraviolet lamp, this bond breakage translates into cellular or genetic damage for micro-organisms, such as germs, viruses, bacteria, fungi (like molds), etc. The fixture continues the proud heritage of RAMIKA PROJECTS quality standards.

RAMIKA PROJECTS

UV CLEAN DESK

Model	UV CLEAN DESK
Input Voltage	220VAC 50/60Hz
Dimensions	280mm x 115mm
Enclosure	Plastic
Weight	3,2kg
Lamp source	254nm
Broad Applications	General Sanitary use; Home, Office, Retail, Hospital, Hotel
Maximum Sanitized Room	Single lamp UV products 10sqm for TB, 16sqm General (ceiling height of 2 700mm)

UVC lamps used in the NORDLAND UV Clean Air are tested to last 8000 hours (assuming a 12 hour usage cycle), or approximately 18 months, before requiring replacement.

Indication light will switch on when lamp replacement is due, and the lamp can be replaced by the user.

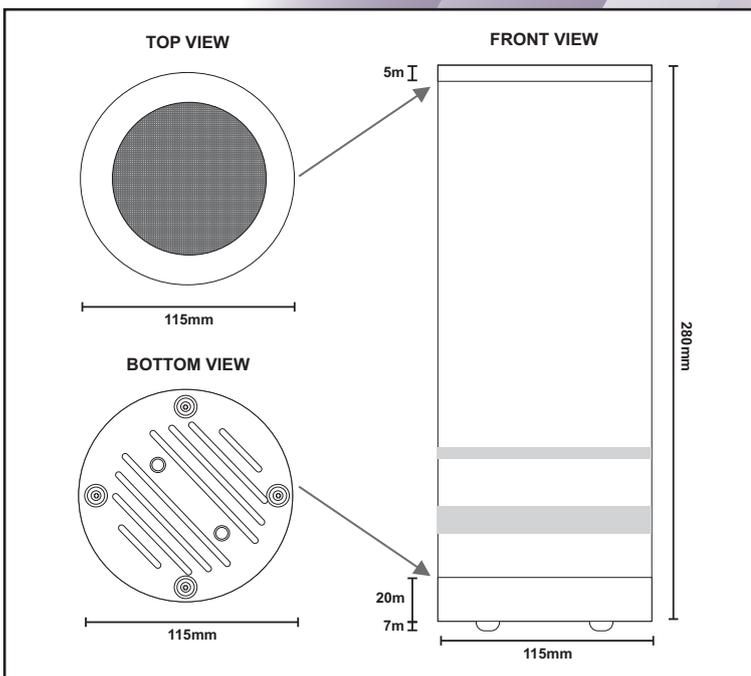

A circulation fan is packaged so that it will blow air centrally and across the face of the UVC Germicidal lamps, to ensure optimal air movement and maximum exposure radiation of the lamps. This ensures that the mJ/cm^2 deactivation dosage is reached of the various organisms to kill them.

An incorporated microswitch is used inside the unit to switch off UVC lamps when opening the enclosure for maintenance reasons.

Below is a list of radiation doses required for 90% inactivation of various micro-organisms:

Common Name	Organism	mJ/cm^2
Common cold	Influenza	6.8
Covid 19	SARS-CoV-2	5
TB	Mycobacterium tuberculosis	10
Strep Throat	Streptococcus viridans	4
Diphtheria	Corynebacterium diphtheriae	6.74
Strain of Meningitis	Streptococcus viridans	4
